

SBR Ad Data Export Guide — For VAs

How to get ad platform data into the SBR Inventory App

Last updated: June 5, 2026 **Contact:** Matt Gibson (gibson.matt27@gmail.com)

Overview

The SBR app needs weekly ad performance data from 4 platforms: Google Ads, Meta (Facebook/Instagram) Ads, Amazon Ads, and Pinterest Ads. Each platform has a built-in export feature — no API keys, no developer accounts, no coding required.

Your job: Set up scheduled exports (Google + Meta) and do weekly manual downloads (Amazon + Pinterest), then upload the CSV files to the SBR app.

PLATFORM 1: Google Ads

Option A: Scheduled Email Report (Recommended — set up once, runs automatically)

1. Go to **ads.google.com** and log in with `stickerburrroller@gmail.com`
2. Click the **Reports** icon (bar chart) in the left sidebar
3. Click **+ Custom** to create a new report
4. Set report type to **Table**
5. Add these columns (drag from the left panel):
6. **Campaign** (under Attributes)
7. **Day** (under Time)
8. **Cost** (under Performance)
9. **Conversions** (under Conversions)
10. **Conv. value** (under Conversions)
11. **Impressions** (under Performance)
12. **Clicks** (under Performance)
13. Set the date range to **Last 7 days**
14. Click the **Schedule** icon (clock icon, top right of the report)

15. Set:
16. Frequency: **Weekly** (every Monday)
17. Format: **CSV**
18. Recipients: `gibson.matt27@gmail.com` (and your email)
19. Click **Save and Schedule**

The report emails every Monday. Download the CSV attachment.

Option B: Google Sheets Add-on (Live data, auto-refreshing)

1. Open a new Google Sheet
 2. Go to **Extensions → Add-ons → Get add-ons**
 3. Search for "**Google Ads**" and install the official Google add-on
 4. Open it: **Extensions → Google Ads → Create report**
 5. Select the same columns as above
 6. Click **Create Report** — it builds a live-updating sheet
 7. Share the sheet URL with Matt
-

PLATFORM 2: Meta (Facebook + Instagram) Ads

Scheduled Email Report (Set up once)

1. Go to **business.facebook.com/adsmanager**
2. Click **Ads Reporting** (in the left sidebar, under "Analyze and report")
3. NOT the main Campaigns table — the dedicated Reporting section
4. Click **Create Report**
5. Add these columns:
6. **Campaign name**
7. **Day** (set as breakdown)
8. **Amount spent**
9. **Impressions**
10. **Link clicks** (or "Clicks (all)")
11. **Purchases** (under Results — you may need to set the result type to "Purchases")
12. **Purchase conversion value** (or "Total conversion value")
13. Set date range to **Last 7 days**
14. Click the **Share** button (top right) → **Schedule recurring email**
15. Set:
16. Frequency: **Weekly**

17. Format: **CSV** or **XLSX**
 18. Recipients: `gibson.matt27@gmail.com`
 19. Click **Schedule**
-

PLATFORM 3: Amazon Ads

Manual Download (Weekly — Amazon doesn't offer auto-email)

1. Go to **advertising.amazon.com** and log in
2. Click **Measurement & Reporting** → **Sponsored ads reports**
3. Click **Create report**
4. Select report type: **Sponsored Products**
5. Select report: **Campaign**
6. Set time unit: **Daily**
7. Set date range: **Last 7 days** (or custom last week)
8. Click **Run report**
9. Wait for it to generate, then click **Download**

Do this every Monday. The file downloads as CSV.

Important: Amazon only stores 60-90 days of report data. If you skip a week, the oldest data may be lost.

PLATFORM 4: Pinterest Ads

Manual Download (Weekly)

1. Go to **ads.pinterest.com**
2. Click into the **Campaigns** view
3. Set the date range to **Last 7 days**
4. Click the **download icon** (near the date picker, looks like a downward arrow)
5. Select **CSV** format
6. Save the file

Do this every Monday.

UPLOADING TO THE SBR APP

After downloading the CSV files:

1. Go to **<https://sbr-app-production-f1c4.up.railway.app>**
 2. Log in
 3. Navigate to **Ad Analytics** (in the sidebar under Tools)
 4. Click the **Deep Dive** tab (or look for the **Upload Ad Data** section)
 5. For each CSV file: a. Select the **Platform** (Google Ads, Meta Ads, Amazon Ads, or Pinterest Ads) b. Click **Choose File** and select the CSV c. Click **Upload** d. Verify the results: "Inserted: X, Updated: Y, Skipped: Z"
 6. If errors appear, check that:
 7. The file is a CSV (not PDF or XLSX)
 8. The correct platform is selected
 9. The date range doesn't overlap with previously uploaded data (duplicates are OK — they update, not duplicate)
-

Weekly Schedule (Set a recurring calendar reminder)

Day	Task	Time
Monday	Download Amazon Ads CSV	5 min
Monday	Download Pinterest Ads CSV	5 min
Monday	Check email for Google Ads CSV (auto)	1 min
Monday	Check email for Meta Ads CSV (auto)	1 min
Monday	Upload all 4 CSVs to SBR app	5 min

Total weekly time: ~17 minutes

Troubleshooting

"I can't find the Google Ads report scheduling option" → You need Editor or higher access to the Google Ads account. Ask Matt to add you.

"Meta says I don't have access to Ads Reporting" → You need Advertiser or Admin role on the ad account in Business Manager. Ask Matt to add you.

"Amazon report says no data" → Check that you're looking at the right time period. If it's a new campaign, it may not have data yet.

"The CSV upload shows 0 inserted, 0 skipped" → The file might be empty, or the column names don't match. Open the CSV in a text editor and check that it has headers like "Campaign", "Cost", etc.

"Upload shows errors for some rows" → Some rows may have formatting issues (special characters, missing dates). The valid rows still get imported. Send the error details to Matt.
